Re: Site Management Activity Completed (SMAC), Tomasi Chevrolet Site #92-1250

Dear Gene:

The Sites Management Section (SMS) has reviewed the August 6, 1992 letter from William Sellinger of Bradford Oil Co. referencing the procedure to be taken to treat the petroleum contaminated soil in the vicinity of the removed UST's at the former Tomasi Chevrolet property in Bradford. The SMS has also reviewed information contained in the site file.

With this information, the SMS can now make the following conclusions:

- On May 21, 1992 six underground storage tanks (UST) were removed from the former Tomasi Chevrolet property in Bradford, Vermont.
- Two of the tanks contained about 350 gallons of waste oil, two of the tanks were filled with gasoline contaminated water, one tank was used to store fuel oil, and the sixth tank was used for hydraulic oil.
- Eight cubic yards of petroleum contaminated soils were removed from the ground and poly-encapsulated onsite. With the exception of a small amount of contamination around the fill pipes the site was clean. The groundwater was not affected.
- The soils were assumed to be tested several months after being stockpiled and then thin spread onsite.

- No unacceptable risk to human health and the environment is present due to any residual contamination remaining in the ground from the former USTs at your property.

Based on the above, the SMS is assigning this site a Site Management Activity Completed (SMAC) designation. This SMAC designation does not release you of any past or future liability associated with the petroleum contamination onsite. It does, however, mean that the SMS is not requesting any additional work in response to the UST removals in 1992.

Please feel free to call with any questions.

Sincerely,

George Desch, Chief, P.E.
Sites Management Section
